

Case Study 3

Woodlands Private Day Nursery

0-1 year

After attending the communication friendly spaces training and through observing and discussing the babies needs, staff created a CFS on the floor giving the opportunity for staff to sit or lie with the children, promoting eye contact and 1-1 interaction.

The area was enhanced with textiles to give the children a sensory experience.

1-2 years

The children in this room were happy to communicate with adults and were developing skills with their peers; therefore it was decided to create a soft space suitable for two children to see out of by using transparent material /voile. The children thoroughly enjoy their new space and sit in there to share books and play boo games.
